## NOISE ABATEMENT PROCEDURES

### BRISBANE

Air Traffic Control will maximise the use of preferred flight paths and over water operations. Pilots and Air Traffic Control will determine when critical operational requirements preclude the use of noise abatement procedures.

#### 1 PREFERRED RUNWAYS OPERATIONS

Day

##### 0600-2200 HR Local Daily.

PRIORITY	LAND	TAKE-OFF
1	RWY 19L/R	RWY 19L/R
2	RWY 01L/R	RWY 01L/R

Night

##### 2200-0600 HR Local Daily.

PRIORITY	LAND	TAKE-OFF
1	RWY 19R	RWY 01R
2	RWY 19L/R	RWY 01R (Reciprocal Runway Operations)
3	RWY 19L/R	RWY 19L
4	RWY 01R	RWY 01L/R

From 2200-0600 Local, RWY 01L arrivals and RWY 19R departures only available in emergency, loss of infrastructure or extreme weather conditions. Brisbane Airport Corporation (BAC) approval required for all other operations. PH: H24 07 3406 3171 or 0435 271 993.

Day and Night preferred runway operations will be nominated during normal operations. Air traffic control may nominate alternative runway configurations when required due to critical operational requirements or unusual operations such as emergencies.

#### Simultaneous Opposite Direction Parallel Runway Operations

From 2200-0600 Local, Simultaneous Opposite Direction Parallel Runway Operations (SODPROP) is preferred (LAND RWY 19R, TAKE-OFF RWY 01R).

When traffic levels and weather conditions allow, SODPROPS may be used at other times to achieve the best possible noise abatement outcomes. This is likely to occur during periods of low demand in the evening during the week, and evening and early morning at the weekend.

Requirements for operating SODPROP are as follows:

- 1) Visibility 8KM
- 2) Cloud base not less than 2500ft, and
- 3) The runway conditions defined in AIP ENR nomination of runways clause.

Between 0600-2200 Local a limited number of RWY 19R non-jet departures may be facilitated to reduce delays for jet aircraft departures from RWY 01R.

If visibility is less than 8km or the cloud base is less than 2500ft, reciprocal runway operations will become the preferred mode during Night hours and the runway conditions defined in the AIP ENR nomination of runway clause are met.

Pilots may request an arrival RWY 19L/R or departure RWY 01R when tailwind exceeds 5KTS during Night hours.

## 2 RUNWAY 19L/R JET DEPARTURES:

Jet noise abatement climb procedures apply as follows:

1. Noise Abatement Departure Procedures (NADP) required for all jet departures including radar departures.
2. NADP1 required if SID cancelled by ATC at Pilot request except due weather.
3. All Jet ACFT to comply with minimum clean speed, or MAX IAS 250KT below 10,000ft.

## 3 INTERSECTION DEPARTURES

### Intersection departures RWY19L/R

#### 0500-2200 Local during daylight saving time (AEDT), 0600-2200 Local outside AEDT:

Not permitted for aircraft exceeding 30,000KG MAUW except aircraft not exceeding ICAO Code letter C aerodrome reference code from intersections A3, T2 or T3.

#### 2200-0500 Local during AEDT, 2200-0600 Local outside AEDT:

Not permitted for all aircraft.

## 4 PREFERRED FLIGHT PATHS

### 4.1 Arriving Aircraft.

1. Landing runway 19L/R:
  - a. From 0600-2200 Local, all JET aircraft will not normally be descended below 3,000ft until east of the coast to avoid noise sensitive areas.
  - b. From 2200-0600 Local, descent below 5,000ft is not permitted for all JET aircraft until east of the coast.
  - c. From 2200-0600 Local, descent below 3,000ft is not permitted for all NON-JET aircraft until east of the coast.
2. Landing runway 01R:
  - a. From 2200-0600 Local, all aircraft shall not descend below 3,000ft until aligned with 01R centreline.
3. Landing runway 01L/R:
  - a. Use, as the final landing flap setting, the minimum certified landing flap setting approved by the operator for the applicable conditions.
  - b. JET aircraft conducting a visual approach, ATC will issue an instruction to join final south of the Brisbane River.
  - c. NON-JET aircraft 5700kg conducting a visual approach, ATC will issue an instruction to join final south of the Brisbane River when ETA is:
    - (i) 2000-2300 or
    - (ii) 0600-1200

### 4.2 Departing Aircraft.

1. Departing runway 19L/R:
  - a. JET aircraft will normally be assigned a procedural SID.
  - b. NON-JET aircraft will normally be assigned a radar SID.
  - c. From 2200-0600 Local non-jet aircraft can expect a left turn to be established and contained over water until above 5,000ft, unless operationally RQ by ATC or priority flights.

**2. Departing runway 01L/R:**

- a. JET aircraft will normally be assigned a procedural SID.
- b. NON-JET aircraft will normally be assigned a radar SID.
- c. From 2200-0600 Local, all aircraft will be contained over water until above 5,000ft.

**NOTE 1:** In the above procedures, the term "all aircraft" applies to all jet propelled aircraft and other aircraft with MTOW exceeding 5700kg, and all other fixed wing aircraft having two or more engines.

**NOTE 2:** Procedural SIDs issued to JET aircraft all have preferred noise abatement procedure flight paths.

**NOTE 3:** JET aircraft may be cleared via a radar SID when required for weather, traffic management or when a pilot cannot accept a procedural SID. When this occurs, aircraft will be processed as closely as possible to comply with the applicable Day or Night Operations NAP.

**5 LANDING - USE OF REVERSE THRUST**

Between 2200-0600 Local time pilots are requested to minimise the use of reverse thrust where operationally acceptable.

**6 TRAINING FLIGHTS - See AIP/ERSA**

13 AUG 2020

**1 BRISBANE - DEPARTING AIRCRAFT**

- 1.1 Whenever possible, complete cockpit checks prior to lineup and keep any checks requiring completion on the runway to a minimum.
- 1.2 On receipt of line up clearance, taxi into position as soon as possible. Do not backtrack.
- 1.3 Pilots and ATC should endeavour to keep aircraft moving and avoid a standing start.
- 1.4 Commence take off roll as soon as take off clearance is issued.

**2 BRISBANE - ARRIVING AIRCRAFT**

- 2.1 By day, ATC may use 2400m runway separation between aircraft arriving to Runway 01R/19L. Both aircraft may occupy the runway during application of the standard.
- 2.2 By day or night, ATC may use 2.5NM spacing between aircraft arriving to Runway 01R/19L. To ensure minimum runway occupancy time and support optimum spacing on final, whenever operational conditions permit, expect to vacate the runway via the Rapid Exit Taxiways (RETs) specified in the table below.
- 2.3 Plan a predictable and efficient exit from the runway and if an exit other than the preferred is required, advise tower on first contact.
- 2.4 Landing Exit Distance (LED), the distance from the threshold to the furthest edge of the exit taxiway, are provided to assist planning.

	Aircraft Type	TWY Exits	LED (Metres)
RWY 19L	Turboprop Prop, Jet	<b><u>A6*</u></b>	<b>1913</b>
	Jet, Heavy	A7	2748
RWY 01R	Turboprop Prop, Jet	<b><u>A4S*</u></b>	<b>1945</b>
	Jet, Heavy	A4	2297
		A3	2783
RWY 19R	Turboprop Prop	<b><u>T7*</u></b>	<b>1427</b>
	Jet	<b><u>T9*</u></b>	<b>1979</b>
	Heavy	<b><u>T11*</u></b>	<b>2429</b>
RWY 01L	Turboprop Prop	<b><u>T8*</u></b>	<b>1427</b>
	Jet	<b><u>T6*</u></b>	<b>1979</b>
	Heavy	<b><u>T4*</u></b>	<b>2429</b>

Note 1: Preferred exits are **bold & underlined**.

Note 2: \* Indicates Rapid Exit Taxiway (RET) and maximum design ground speed is 50KT.

## Independent Parallel Approaches (Finals Monitoring) User Instructions Brisbane

The following instructions apply when aircraft are advised by ATIS or ATC that "INDEPENDENT PARALLEL APPROACHES IN PROGRESS".

### RNP AR APPROACHES

RNP-AR approaches permit reduced separation between aircraft conducting Independent Parallel Approaches. When cleared for an RNP-AR Approach, the aircraft is considered 'established' on the approach procedure once it is on the defined lateral and vertical path and past the IAF for the procedure.

If unable to comply with the ATC clearance or conduct the cleared approach, as soon as possible advise the controller and comply with subsequent ATC instructions.

### ILS APPROACHES

**LOW-SIDE APPROACH START ALTITUDES:** Expect to reach the procedure initial approach altitude below the normal descent profile.

- **RWY 01R** - expect to reach **3000'** AT VATRO.
- **RWY 19R** - expect to reach **3000'** AT ATRAX.

**HIGH-SIDE APPROACH:** Do not descend below assigned altitude till established on the glide path.

### OPERATIONAL REQUIREMENTS

**AUTOPILOT COUPLED APPROACHES:** It is recommended that approaches (ILS and RNP AR) are flown with the aircraft autopilot coupled.

**TCAS SELECTION:** Pilots should leave TCAS in RA mode.

**'FINALS FREQUENCY':** Aircraft will be transferred to the FINALS frequency prior to becoming established on final. i.e. 'Contact FINALS on.....'

The FINALS controller will monitor approaches and issue course correction and break-out instructions if necessary.

**DEVIATIONS:** When an aircraft deviates from their final approach course towards the No Transgression Zone (NTZ), FINALS will issue the following instruction:

***"(callsign) YOU ARE DEVIATING FROM YOUR FINAL APPROACH COURSE TURN LEFT (or RIGHT) IMMEDIATELY AND RETURN TO YOUR CLEARED APPROACH."***

Acknowledge deviation advice as soon as practicable.

### BREAK-OUT INSTRUCTIONS

**BREAK-OUT:** If FINALS determines that an aircraft has or will penetrate the NTZ and avoiding action is required, the non-deviating aircraft on the adjacent approach will be issued BREAK-OUT instructions using the following phraseology:

***"BREAK-OUT ALERT, (callsign) TURN LEFT (or RIGHT) IMMEDIATELY HEADING (three digits), CLIMB (or DESCEND) TO (altitude)"***

**HAND FLY A BREAK-OUT:** When issued with BREAK-OUT instruction, time is critical. Break-out procedures **MUST BE HAND FLOWN**. In exceptional circumstances a descending BREAK-OUT may be given but the assigned altitude will not be below the applicable (MVA). Read back the break-out instruction as soon as practicable.
