2 - PREFERRED FLIGHT PATHS

2.1 - Arriving Aircraft

These procedures will apply to all aircraft between **1900 and 0700** Local.

(NOTE: For arriving jet aircraft landing Runway 34L and 34R preferred flight path procedures apply at all times).

2.1.1 - Arriving jet aircraft landing Runway 07 will not be permitted to descend below 3,000ft over built-up areas until aligned with the runway centreline prior to ANKUB.

For arriving jet aircraft landing Runway 25, preferred flight path procedures apply.

Further, to assist with noise reduction in the Sydney Terminal Area, it is recommended that, as far as is practicable and to the extent that ATC speed control requirements permit, pilots delay the deployment of flaps until operationally required.

2.1.2 - Other arriving aircraft will not be permitted to descend below 2,000ft over built-up areas until aligned with the runway centreline.

2.1.3 - ATC will route aircraft over less noise-sensitive areas to the various runways whenever possible. Frequent use will be made of seaward tracking during the night hours.

2.2 - Departing Aircraft

ATC will route departing jet aircraft via Standard Instrument Departures which, where applicable, are contained within the designated flight corridors listed in paragraph 6, and other aircraft, over less noise sensitive areas.

3. - TRAINING FLIGHTS.

See AIP/ERSA.

4. - CURFEW

4.1 INTRODUCTION

4.1.1. The Sydney Airport Curfew Act 1995, the Sydney Airport Curfew Regulations and the Air Navigation (Aerodrome Curfew) Regulations regulate movements at Sydney/Kingsford-Smith Aerodrome between 2300 and 0600 Local. Additional restrictions apply, daily between 2245 and 2300 Local, and on Saturdays and Sundays between 0600 and 0700 and 2200 and 2300 Local.

4.1.2 The Act contains provisions for severe penalties for any unauthorised operations between the above times and for failure to provide information or the provision of false information.

4.1.3 The restrictions set out in this document become effective for all aircraft operating at Sydney/Kingsford Smith Aerodrome at 2245 Local on 24 December 1995. Specific operators have some concessions which are not listed here.

4.2 RESTRICTIONS APPLICABLE TO ALL AIRCRAFT

4.2.1 The restrictions listed in this paragraph are applicable to all aircraft including prop-propeller driven aircraft over 34,000KG MTOW. There are some concessions for specified classes of aircraft which are listed in the section titled 'Concessions for International Aircraft'.

4.3 GROUP OF AIRCRAFT THAT CAN OPERATE

Only the following aircraft may take off or land at Sydney Aerodrome between 2300 and 0600 Local:

(a) Propeller-driven aircraft with a MTOW of 34,000KG or less that meet the noise level requirements of *ICAO Annex 16, Volume 1, Part 11, Chapter 3,5,6 or 10* (as appropriate to the aircraft classification).

(b) Jets with a MTOW of 34,000KG or less that meet the noise level requirements of *ICAO Annex 16, Volume 1, Part 11, Chapter 4 or 14*.

4.4 AVAILABLE RUNWAYS

All aircraft permitted to operate during the curfew period, and during the restricted times around the curfew period, must use the following RWY, unless the provisions of 4.5 or 4.6 apply:

(a) for landing:

- (i) 0600-0700 HR and 2200-2300 HR (SAT and SUN) Local.
Only RWY 34L, unless another RWY is nominated by ATC
- (ii) 2300-0600 HR (Daily) Local.
Only RWY 34L;

(b) for take-off:

- (i) 0600-0700 HR and 2200-2245 HR (SAT and SUN) Local.
Only RWY 16R or 16L, unless another RWY is nominated by ATC.
- (ii) 2245-2300 HR (Daily) Local.
Only RWY 16R or 16L;
- (iii) 2300 - 0600 HR (Daily) Local.
Only RWY 16R, south of the intersection of taxiway G.

NOTE: Aircraft that receive a taxi clearance prior to the commencement of the Curfew period (2300 HR Local) but subsequently depart after the commencement of the Curfew May use the full length of the runway and are not required to reposition south of the intersection of RWY 16R and taxiway G.

- (iv) If an aircraft receives taxi clearance prior to 2300 HR it may take off from RWY 16R even though the departure time may be within the curfew period;

4.5 EXEMPTIONS

These restrictions to operations do not apply to a flight under the following circumstances:

(a) The aircraft is being used for or in connection with:

- (i) a search and rescue operation;
- (ii) a medical emergency
- (iii) a natural disaster;

(b) the pilot of the aircraft has declared an in-flight emergency;

(c) the aircraft has insufficient fuel to be diverted to another airport;

(d) there is an urgent need for the aircraft to land or take-off;

- (i) to ensure the safety or security of the aircraft or any person; or
- (ii) to avoid damage to property.

4.6 DISPENSATIONS

4.6.1 Dispensation from these conditions requires the approval of the Minister for Transport. The Minister, or a delegate of the Minister, may approve operations in exceptional circumstances having regard to the guidelines for approval of dispensations.

4.6.2 An operator may apply to the Department of Infrastructure, Transport, Regional Development, Communications and the Arts for a dispensation to land at, or take off from, Sydney Airport during the curfew. 1 - SYDNEY-DEPARTING AIRCRAFT

- 1.1 - Whenever possible, complete cockpit checks prior to line-up and keep any checks requiring completion on the runway to a minimum.
- 1.2 - On receipt of line up clearance, taxi into position as soon as possible. Do not backtrack.
- 1.3 - Pilots and ATC should endeavour to keep aircraft moving and avoid a standing start.
- 1.4 - Commence the take off roll as soon as take off clearance is issued.

2 - SYDNEY-ARRIVING AIRCRAFT

- 2.1 - By day, ATC may use 2400M runway separation between aircraft arriving to Runway 16R/34L. Both aircraft may occupy the runway during application of the standard.
- 2.2 - To ensure minimum runway occupancy time and support optimum spacing on final, whenever operational conditions permit, expect to vacate the runway via the exit taxiways specified in the table below.
- 2.3 - Plan a predictable and efficient exit from the runway and if an exit other than the preferred is desired, advise tower on first contact.
- 2.4 - Landing Exit Distance (LED), the distance from the threshold to the furthest edge of the exit taxiway, are provided to assist planning.

PRM USER INSTRUCTIONS INDEPENDENT PARALLEL APPROACHES

Precision Runway Monitor (PRM) operations are conducted at Sydney to facilitate independent parallel approaches to closely spaced parallel runways. The following instructions apply during independent parallel approaches when pilots are advised by ATIS "PRM OPERATIONS IN PROGRESS".

REQUIREMENTS: Before participating in PRM operations, pilots must have satisfied training requirements as directed by CASA, or be approved for PRM operations by the NATIONAL AVIATION AUTHORITY (NAA) for the state of registration of the ACFT.

If unable to participate in PRM operations, pilots MUST notify ATC prior to 120 DME SY (or if departing from within 120 DME SY on first contact with ATC).

PRM operations assume all participating aircraft conduct a GLS or ILS approach to their respective RWY. Circling approaches are not available during PRM operations.

LOW-SIDE APPROACH START ALTITUDES: Expect to reach the procedure initial approach altitude below normal descent profile.

-RWY 16R - expect to reach **3000FT** at least **6NM before URDEN**.

-RWY 34R - expect to reach **2000FT** before **ENDEV**.

APPROACHES WITH AUTOPILOT ENGAGED: It is recommended that approaches are flown with the aircraft autopilot engaged.

TCAS SELECTION: Pilots should maintain TCAS in the RA mode.

DUAL VHF REQUIREMENTS: Each approach has both a TWR and a PRM frequency. The TWR and PRM controllers transmit simultaneously on both frequencies. Pilots must only transmit on the TWR frequency, and LISTEN TO BOTH. Set the PRM frequency volume prior to transfer to TWR at the same level to ensure ATC instructions can be heard on both frequencies in case of a blocked transmission.

DEVIATIONS: When an aircraft deviates from the final approach course towards the No Transgression Zone (NTZ), ATC will issue the following instructions:

"(callsign) YOU ARE DEVIATING FROM THE FINAL APPROACH COURSE. TURN LEFT (or RIGHT) IMMEDIATELY AND RETURN TO YOUR CLEARED APPROACH."

Acknowledge deviation advice as soon as practicable. Compare tracking indications and use the indicator most consistent with ATC advice. Immediately adjust tracking to regain the final approach course.

BREAK-OUT: If ATC determines that an aircraft has or will penetrate the NTZ and avoiding action is required, the non-deviating aircraft on the adjacent approach will be issued BREAK-OUT instructions using the following phraseology:

"BREAK-OUT ALERT, (callsign) TURN LEFT (or RIGHT) IMMEDIATELY HEADING (three digits), CLIMB (or DESCEND) TO (altitude)"

HAND FLY A BREAK-OUT: When issued with BREAK-OUT instruction, time is critical. Break-out procedures **MUST BE HAND FLOWN**. In exceptional circumstances a descending BREAK-OUT may be given but the assigned altitude will not be below the applicable (MVA). Read back the break-out instruction as soon as practicable.

Independent Visual Approach

Independent visual approaches (IVA) may be used at Sydney during parallel operations in the RWY 16 or RWY 34 direction. Depending on the meteorological conditions they may be initiated from a circuit or from an instrument approach once the pilot is visual.

Important instructions and advisory information for pilots:

- Report visual and/or the runway in sight as soon as possible.
- Manage speed on base leg to ensure you do not overshoot the centreline.
ATC approach speeds apply,
160-185KT 10NM FM THR and 150-160KT 5NM FM THR.
- Fly accurate headings when being vectored to final.
- The vector for final will not be greater than 30 degrees.
- Remain on the DIR frequency until you are established on final.
- ATC will provide surveillance or vertical separation until cleared for an IVA.
- Do not pass through your assigned RWY centreline.
- Other aircraft will be operating on the adjacent approach.
- Traffic Information will be provided if another aircraft is within 1NM on final.
- Flight crew must respond to any TCAS alert in accordance with the procedures in the aircraft's flight manual.
- The phraseology will include "CLEARED INDEPENDENT VISUAL APPROACH".
- Accurately track the extended runway centreline.
- Once you are cleared for an IVA the requirements of the procedure must be followed.
- If for any reason, including radio failure or radio congestion, contact cannot be established or maintained with DIR such that it prevents an instruction being issued by ATC or a vectoring request being made by the flight crew, do not pass through your assigned RWY centreline. Commence the turn to enable intercept of the final approach course for the runway assigned, then track the extended centreline of the runway assigned.
- The layout of Sydney aerodrome has shown that wake turbulence encounters are possible even though the required standard is in place.
- The ILS critical area is not protected.

Both these aircraft only have to report visual if on localiser or GLS final approach course.

This aircraft must have reported runway in sight.
